

Italian Project on the Epidemiology of Alzheimer's Disease

<https://neurodegenerationresearch.eu/cohort/italian-project-on-the-epidemiology-of-alzheimers-disease/>

Cohort Acronym

IPREA

Cohort type

General population-based cohort

Disease

Alzheimer's disease, Other NDs not listed

Participant type

No diagnosis

Profile

Recruitment Period 2003

Sample size at start or planned sample size if still recruiting

Estimated Current Sample Size

Age at Recruitment 65-84

Gender Male and Female

Abstract

All people aged 65-84 listed in the population registers of the 12 Italian participating towns as resident and alive on the 31.12.2002. The community based random sample was stratified by gender and 5-year age classes following an equal allocation strategy.

The general objective of IPREA-FU is to improve the evidence base on the preclinical phase of dementia, providing a better insight into its heterogeneous evolution.

Variables Collected

Brain related measures:

Cognitive function

Functional rating:

Individual physiological, Individual psychological

Anthropometric:

Blood pressure

Physical:

Cardiovascular

Biological samples:

Blood

Genotyping:

N/A

Brain imaging:

Magnetic resonance imaging (MRI)

Brain banking:

N/A

Lifestyle:

N/A

Socio-economic:

N/A

Health service utilisation:

Formal health and social care service utilisation including private care
