

# Quebec Longitudinal Study of Child Development

<https://neurodegenerationresearch.eu/el/cohort/quebec-longitudinal-study-of-child-development/>

## Cohort Acronym

QLSCD

## Cohort type

General population-based cohort

## Disease

## Participant type

No diagnosis

## Profile

Recruitment Period 1998

Sample size at start or planned sample size if still recruiting

Estimated Current Sample Size

Age at Recruitment 5 months

Gender Male and Female

Abstract

The main objective of QLSCD is to identify the precursors of children's social adaptation, school adjustment, and well-being throughout their developmental trajectory. This study has information on young children's (now young adults) health, behaviour and many other aspects of their life.

Country Canada

## Variables Collected

### Brain related measures:

N/A

### Functional rating:

N/A

**Anthropometric:**

Blood pressure, Height, Hip circumference, Waist circumference, Weight

**Physical:**

Cardiovascular

**Biological samples:**

Blood, Other, Saliva

**Genotyping:**

Gene screening

**Brain imaging:**

N/A

**Brain banking:**

N/A

**Lifestyle:**

Alcohol, Dietary habits, Physical activity, Smoking

**Socio-economic:**

Education, Family circumstances, Housing and accommodation, Income and finances, Occupation and employment

**Health service utilisation:**

Formal health and social care service utilisation including private care
