

Quebec Longitudinal Study of Child Development

<https://www.neurodegenerationresearch.eu/cohort/quebec-longitudinal-study-of-child-development/>

Cohort Acronym

QLSCD

Cohort type

General population-based cohort

Disease

Participant type

No diagnosis

Profile

Recruitment Period 1998

Sample size at start or planned sample size if still recruiting

Estimated Current Sample Size

Age at Recruitment 5 months

Gender Male and Female

Abstract

The main objective of QLSCD is to identify the precursors of children's social adaptation, school adjustment, and well-being throughout their developmental trajectory. This study has information on young children's (now young adults) health, behaviour and many other aspects of their life.

Variables Collected

Brain related measures:

N/A

Functional rating:

N/A

Anthropometric:

Blood pressure, Height, Hip circumference, Waist circumference, Weight

Physical:

Cardiovascular

Biological samples:

Blood, Other, Saliva

Genotyping:

Gene screening

Brain imaging:

N/A

Brain banking:

N/A

Lifestyle:

Alcohol, Dietary habits, Physical activity, Smoking

Socio-economic:

Education, Family circumstances, Housing and accommodation, Income and finances, Occupation and employment

Health service utilisation:

Formal health and social care service utilisation including private care
