

Rete Geriatrica Alzheimer Project

<https://neurodegenerationresearch.eu/cohort/rete-geriatrica-alzheimer-project/>

Cohort Acronym

ReGAI

Cohort type

General population-based cohort

Disease

Alzheimer's disease, Frontotemporal dementia, Lewy body disease, Mild cognitive impairment (MCI), Parkinson's disease, Subjective memory complaints (SMC) or subjective cognitive decline (SCD), Vascular dementia

Participant type

No diagnosis

Profile

Recruitment Period Jan 2000 - April 2017

Sample size at start or planned sample size if still recruiting 3897

Estimated Current Sample Size 0 to 4,999

Age at Recruitment 50-100

Gender Male and Female

Abstract

In this epidemiological study we examined the prevalence of medical comorbidity in elderly subjects with cognitive deficits and dementia. The ReGAI Project (Rete Geriatrica Alzheimer- Geriatric Network on Alzheimer's disease) collected data in 33 Italian Geriatric memory clinics from January 2001 to December 2005. A total of 4,075 patient were recruited.

Funders (Core support)

Variables Collected

Brain related measures:

Behaviour, Cognitive function, Mental health, Neurological

Functional rating:

Caregiver

Anthropometric:

Blood pressure, Height, Hip circumference, Waist circumference, Weight

Physical:

Cardiovascular, Hearing and Vision, Musculoskeletal, Respiratory

Biological samples:

N/A

Genotyping:

Gene screening

Brain imaging:

Magnetic resonance imaging (MRI), Magnetic resonance spectroscopy (MRS), Positron emission tomography (PET) fluorine18 flurodeoxyglucose (FDG)

Brain banking:

N/A

Lifestyle:

Alcohol, Smoking

Socio-economic:

Education, Ethnic group, Housing and accommodation, Income and finances, Marital status, Occupation and employment, Unpaid care

Health service utilisation:

Formal health and social care service utilisation including private care
