Cohort Acronym

SHeS

Cohort type

General population-based cohort

Disease

Participant type

No diagnosis

Profile

Recruitment Period 1995-2016

Sample size at start or planned sample size if still recruiting 4,659

Estimated Current Sample Size 0 to 4,999

Age at Recruitment >0

Gender Male and Female

Abstract

The Scottish Health Survey (SHeS) provides a detailed picture of the health of the Scottish population in private households and is designed to make a major contribution to the monitoring of health in Scotland.

The series aims to:

- estimate the occurrence of particular health conditions
- estimate the prevalence of certain risk factors associated with health
- look at differences between regions and between subgroups of the population
- monitor trends in the population's health over time
- make a major contribution to monitoring progress towards health targets

Country United Kingdom

Variables Collected

Brain related measures:

N/A

Functional rating:

N/A

Anthropometric:

Blood pressure, Height, Hip circumference, Waist circumference, Weight

Physical:

Cardiovascular, Respiratory

Biological samples:

Blood, Saliva, Urine

Genotyping:

N/A

Brain imaging:

N/A

Brain banking:

N/A

Lifestyle:

Alcohol, Dietary habits, Physical activity, Smoking

Socio-economic:

Education, Ethnic group, Family circumstances, Housing and accommodation, Income and finances, Informal support, Marital status, Occupation and employment, Unpaid care

Health service utilisation:

N/A
