Cohort Acronym

SLS

Cohort type

General population-based cohort

Disease

Participant type

No diagnosis

Profile

Recruitment Period 1991 - present

Sample size at start or planned sample size if still recruiting

Estimated Current Sample Size

Age at Recruitment >0

Gender Male and Female

Abstract

The Scottish Longitudinal Study (SLS) is a large-scale linkage study created using data from administrative and statistical sources. These include: census data from 1991 onwards; vital events data (births, deaths, marriages); NHS Central Register data (gives information on migration into or out of Scotland); and education data (including Schools Census and SQA data).

Country United Kingdom

Variables Collected

Brain related measures:

N/A

Functional rating:

N/A

Anthropometric:

N/A

Physical:

Reproductive

Biological samples:

N/A

Genotyping:

N/A

Brain imaging:

N/A

Brain banking:

N/A

Lifestyle:

N/A

Socio-economic:

Education, Ethnic group, Family circumstances, Housing and accommodation, Income and finances, Informal support, Marital status, Occupation and employment, Unpaid care

Health service utilisation:

Formal health and social care service utilisation including private care
