

# Stockholm Birth Cohort

<https://neurodegenerationresearch.eu/cohort/stockholm-birth-cohort/>

## Cohort Acronym

### Cohort type

General population-based cohort

### Disease

### Participant type

No diagnosis

### Profile

Recruitment Period November 1st 1963

Sample size at start or planned sample size if still recruiting 13,838

Estimated Current Sample Size 10,000 to 19,999

Age at Recruitment 10

Gender Male and Female

Abstract

The Stockholm Birth Cohort Study (SBC) was created in 2004/2005 by a probability matching of two comprehensive and longitudinal datasets. The first, the Stockholm Metropolitan study 1953–1985, consists of all children born in 1953 and living in the Stockholm metropolitan area in 1963. The second, The Swedish Work and Mortality Database 1980–2009 (WMD), consists of all individuals living in Sweden in 1980 or 1990, and born before 1985. The initiative to create the database was taken by Denny Vågerö at the Centre for Health Equity Studies, CHESS, of Stockholm University/Karolinska Institute and Sten-Åke Stenberg at the Swedish Institute for Social Research, Stockholm University (SOFI). The resulting database provides a 50-year long follow-up of the original 1953 birth cohort.

Country Sweden

### Contact details

Institution name Stockholms Universitet

Website <http://www.stockholmbirthcohort.su.se/>

Principal Investigator (PI) Dr Ylva B. Almquist

Contact email PI e-mail: [ylva.almquist@su.se](mailto:ylva.almquist@su.se)

Contact phone number +46 8 674 79 69

Funders (Core support) The Swedish Research Council (VR), The Swedish Research Council for Health, Working Life and Welfare (Forte)

### Variables Collected

### Brain related measures:

N/A

**Functional rating:**

N/A

**Anthropometric:**

Height, Weight

**Physical:**

N/A

**Biological samples:**

N/A

**Genotyping:**

N/A

**Brain imaging:**

N/A

**Brain banking:**

N/A

**Lifestyle:**

Alcohol, Physical activity, Smoking

**Socio-economic:**

Education, Family circumstances, Housing and accommodation, Income and finances, Marital status, Occupation and employment

**Health service utilisation:**

Formal health and social care service utilisation including private care
