01/01/16

Total duration of award in years

5.0

The project/programme is most relevant to:

Alzheimer's disease & other dementias

Keywords

neuropsychology | cognitive decline | prevention | aboriginal health | assessment

Research Abstract

Dementia is a growing concern and burden on communities for Aboriginal Australians. This fellowship will develop effective, culturally appropriate, and accessible strategies to promote healthy brain ageing and prevent dementia in Aboriginal communities. It will also investigate better ways to assess memory and thinking in this population, in order to identify changes as early as possible for enhanced dementia research and treatment prospects.

Types:

Fellowships
