Title of project/programme

Estimating And Alleviating The Impacts Of Age-Related Sensory Decline

Source of funding information

NHMRC

Total sum awarded (Euro)

€ 213,519

Start date of award

01/01/15

Total duration of award in years

5.0

The project/programme is most relevant to:

Alzheimer's disease & other dementias

Keywords

ageing | cognitive function | sensory impairment | longitudinal cohort study | hearing loss

Research Abstract

Sensory loss and dementia disproportionately affect older adults, often co-occur, and are the

two leading contributors to disability burden among older Australians. This research will investigate the consequences that hearing and vision loss have for older adult health and wellbeing, informing strategies to reduce the disability burden of age-related sensory loss. These impacts include cognitive decline and dementia, mental health, quality of life, disability and independent living.
