## **Contact information of lead PI**

### **Country**

Netherlands

## **Title of project or programme**

Evaluation of the impact of the AlzheimerNet programme: a Comparative Effectiveness Research on the transit from fragmented care to a collaborative dementia networks of multidisciplinary care

## **Source of funding information**

Alzheimer Nederland

## **Total sum awarded (Euro)**

€ 326,902

## **Start date of award**

01/01/2014

## **Total duration of award in years**

4.0

## **The project/programme is most relevant to:**

Alzheimer's disease & other dementias

**Keywords**

**Research Abstract**

DementiaNet improves local collaboration among healthcare professionals to provide care for community-dwelling elderly with dementia. Overall, the approach aims to reduce the burden of the disease for all persons involved in dementia care, including healthcare professionals, patients and their informal caregivers. Our mission is to deliver added value for patients, caregivers and society, by realizing an innovative cost-effective change in the care processes, realized by and fine-tuned for the locally collaborating professionals. We activate patients and carers, and start from their experiences and questions, which we adopt in line with network and system based methodologies.
