Name of Fellow

A/Pr Olivier Piguet

Institution

Funder

NHMRC

Contact information of fellow

Country

Australia

Title of project/programme

Improving diagnosis and prognosis of early-onset dementia

Source of funding information

NHMRC

Total sum awarded (Euro)

€ 423,019

Start date of award

01/01/16

Total duration of award in years

5.0

The project/programme is most relevant to:

Alzheimer's disease & other dementias

Keywords

frontotemporal dementia | alzheimer disease | neuroimaging | social cognition | diagnosis

Research Abstract

Frontotemporal dementia accounts for ~15% of all dementias. It is as common as Alzheimer's disease in the < 65 year olds but understanding of this disease remains limited. Over the next 5

years, my research will work towards improving diagnosis, prognosis and prediction of pathology, using a multidisciplinary approach that combines clinical, brain imaging, genetics and neuropathological investigations. This research will contribute to improving the care and quality of life of dementia patients.
