Title of project/programme

Memory training in older diabetic persons at risk of dementia

Source of funding information

NHMRC

Total sum awarded (Euro)

€ 245,515

Start date of award

01/01/14

Total duration of award in years

5.0

The project/programme is most relevant to:

Alzheimer's disease & other dementias

Keywords

diabetes | dementia-related decline in memory | cognitive outcome | rehabilitation | neuropsychiatry

Research Abstract

Older people with diabetes have a higher chance of developing cognitive decline and dementia.

Certain types of cognitive training were found to be effective for those at higher risk for dementia, but these treatments have not been tried on diabetic patients. This project will examine the impact of a cognitive training treatment on diabetic patients. It will examine its effectiveness in this group and some of the characteristics that may predict who responds best to the treatment.

Types:

Fellowships
