Institution

Funder

NHMRC

Contact information of fellow

Country

Australia

Title of project/programme

Modifiable risk factors for cognitive impairment in ageing

Source of funding information

NHMRC

Total sum awarded (Euro)

€ 312,063

Start date of award

01/01/14

Total duration of award in years

5.0

The project/programme is most relevant to:

Alzheimer's disease & other dementias

Keywords

cognitive function | preventive health | alzheimer disease | women's health | cardiovascular risk factors

Research Abstract

This study focuses on age-related decline in cognitive function in midlife. Early detection of

people at risk will allow the introduction of health programs to reduce disease. This study would provide essential information on the role of hormones and vascular risk factors in cognitive decline. This information will fill a significant gap in our knowledge on the role of hormones and vascular factors and open a potential avenue of treatment to improve cognitive outcomes in ageing.

Types:

Fellowships

Member States:

Australia

Diseases:

Alzheimer's disease & other dementias

Years:
