

Implementation of quality indicators in palliative care study (IMPACT)

<https://www.neurodegenerationresearch.eu/survey/title-of-piimplementation-of-quality-indicators-in-palliative-care-study-impact/>

Title of project or programme

Title of PI Implementation of quality indicators in palliative care study (IMPACT)

Principal Investigators of project/programme grant

Title	Forname	Surname	Institution	Country
prof. dr. Myrra		Vernooij-Dassen	Alzheimer Centrum Nijmegen	Netherlands
prof. dr. Kris		Vissers	Radboud University Medical Centre Nijmegen	Netherlands
dr. Yvonne		Engels	Radboud University Medical Centre Nijmegen	Netherlands

Address of institution of lead PI

Institution Alzheimer Centrum Nijmegen
Street Address Reinier Postlaan 4
City Nijmegen
Postcode 6525 GC

Country

- Netherlands

Source of funding information

Dutch Alzheimer's Association (Azheimer Nederland)

Total sum awarded (Euro)

3000000

Start date of award

01-02-2011

Total duration of award in months

60

The project/programme is most relevant to

- Alzheimer's disease and other dementias
- Neurodegenerative disease in general

Keywords

implementation, strategies, setting-specific, indicators, palliative care, dementia, cancer

Research abstract in English

New knowledge is not necessarily readily applied in medicine, even when there is evidence of its effectiveness. As a result of the gap between knowing and doing, policy makers, professional care providers, patients and their families have benefited too little from new developments. Implementation research has developed models for stepwise implementation but it is still unclear which strategies are effective for whom and which factors influence the effectiveness of implementation strategies. From the point of view of implementation sciences changing palliative care is a major challenge, since adequate organization of palliative care requires collaboration between a range of different professionals and healthcare organizations. Besides, as a consequence of the ageing population, the number of people in need for cancer and dementia palliative care will rise. Therefore we will focus on implementation strategies in palliative care. The overall aim of this project is to develop optimal implementation strategies for using quality indicators to improve the organization of palliative cancer and dementia care in Europe and to study factors influencing the effectiveness of the strategies. We will focus on the implementation process and will concentrate the work packages on: the organization of palliative care, the development of a set of setting-specific implementation strategies including an interactive website and instruction by consultants, the evaluation of the use of the selected strategies to improve the organization of palliative care and factors influencing the effectiveness of the implementation strategies.

This information will be used to build a conceptual model that should be applicable across diverse healthcare settings and that allows rigorous assessment of the effectiveness of implementation strategies. The dissemination of the results will be enhanced by involving stakeholders, including two European networks related to the subject of this implementation process study.

Lay Summary

In which category does this research fall?

- Health and social care research
