Principal Investigators

Professor Carol Brayne

Institution

University of Cambridge on behalf of CFAS

Contact information of lead PI

Country

United Kingdom

Title of project or programme

Transdisciplinary training for dementia research in CFAS

Source of funding information

Alzheimer's Society

Total sum awarded (Euro)

€ 474,530

Start date of award

01/10/2015

Total duration of award in years

5.0

The project/programme is most relevant to:

Alzheimer's disease & other dementias

Keywords

Research Abstract

Over the past 20 years the multi-disciplinary, multi-institutional group of studies now called The Cognitive

Function and Ageing Studies have provided a platform for a variety of types of research ranging from descriptive

epidemiology to detailed molecular mechanisms. Their strength has been their ability to

translate across disciplines and to provide a population based perspective on current advances. Embedded within this programme has been a training ethos and the study has supported a wide range of postdoctoral research projects based at different institutions. We propose to formalise this through the welcome initiative from the Alzheimer's Society and to increase capacity in multidisciplinary research related to dementia. The model is that individual institutions would host projects but that these particular projects would have transdisciplinary elements which drew in the distributed expertise from across the CFAS collaborative network. We have a proven track record with such doctoral studies which have already increased capacity in dementia research across the country.
