Title of project or programme

TRP channels, calcium and AD

Source of funding information

National Health and Medical Research Council

Total sum awarded (Euro)

€ 274,890

Start date of award

01/01/2013

Total duration of award in years

4

Keywords

Research Abstract

This research outlined in this application aims to uncover the molecular mechanisms that cause Alzheimer's disease (AD). Specifically the research will examine the mechanism by which Abeta, a protein which plays a central role in AD, causes neurodegeneration. The significance of this work is that it may help to identify new targets for AD drug development.
