Name of Fellow

Dr Matthew Pase

Institution

Funder

NHMRC

Contact information of fellow

Country

Australia

Title of project/programme

Vascular risk factors for incident dementia and brain ageing

Source of funding information

NHMRC

Total sum awarded (Euro)

€ 260,699

Start date of award

01/01/15

Total duration of award in years

4.0

The project/programme is most relevant to:

Alzheimer's disease & other dementias

Keywords

dementia | cerebrovascular disease | brain ageing | cardiovascular health | arterial stiffness

Research Abstract

Dementia is a debilitating disease associated with the progressive loss of brain volume, cognitive ability and independence. The proposed study aims to define vascular factors

associated with the risk of dementia in a large cohort of adults from the Framingham Heart Study, USA. As vascular risk factors can be lowered with already available interventions, it is hoped that results may lead to improved primary prevention guidelines, ultimately reducing the global burden of dementia.
