Title of project or programme

Whole Genome Sequencing; 100plus Study

Source of funding information

alzheimer nederland

Total sum awarded (Euro)

€ 237,500

Start date of award

01/01/2014

Total duration of award in years

6

Keywords

Research Abstract

In this study we propose to discover the underlying genetic factors protecting against development of Alzheimer's disease, as evidenced by cognitive and intellectual health until extreme old age. As such, we approach the dementia problem with a unique innovative perspective: instead of asking which factors are involved in dementia development, we ask how a person does NOT develop dementia.
