

Country	Australia
Organisation	National Health and Medical Research Council

This document contains information on **specific requirements** for the funding organisation indicated above. Not fulfilling the requirements may lead to **ineligibility of the application**. In case of any uncertainties please contact the related funding organisation (see below).

Contact

National contact person	Julie Glover National Health and Medical Research Council (NHMRC) dementia.research@nhmrc.gov.au
-------------------------	--

Eligibility

Eligible Institutions	<p>Institutions must be an NHMRC approved Administering Institution to be eligible to receive and administer NHMRC funding – https://www.nhmrc.gov.au/grants-funding-administering-grants</p> <p>Applications for NHMRC funding are subject to the general eligibility requirements as set out in the 2018 NHMRC Funding Rules and NHMRC Funding Agreement. Applicants should read all relevant reference material: https://www.nhmrc.gov.au/grants-funding/apply-funding/boosting-dementia-research-grants</p>
Additional requirements	<p>NHMRC will only fund applications with a key focus on Alzheimer’s disease or other dementias. Applying for funding with any other focus under this call will not be supported through the Boosting Dementia Research Grants Scheme Priority Round 4. However, Australian researchers who have other sources of funding are not restricted to this focus.</p> <p>Additional guidance on this requirement: Dementia is the outward and visible manifestation of a number of diseases resulting in deficits in memory, thinking, behaviour and ability to perform everyday activities. Alzheimer’s disease is the most common cause, but there are many other causes of dementia (e.g. vascular dementia, dementia with Lewy bodies, frontotemporal dementia, etc.) and other symptoms. There are many other conditions which are associated with dementia. In this context, dementia can be a feature of Parkinson’s.</p> <p>For this JPND call, a project will fall within scope for funding by NHMRC if the project explicitly addresses dementia, or if the focus is on dementia as part of the broader manifestations of a neurodegenerative disorder. For example, a project that examines the phenotypic variation seen in Parkinson’s would not be within scope, but a project that examines Parkinson’s-related dementia would be within scope.</p> <p>Applicants from Australia intending to apply for funding via the Boosting Dementia Research Grants Scheme should notify the national contact point at NHMRC to signal an intention to join a consortium, via dementia.research@nhmrc.gov.au.</p>

	Australian applicants should also refer to the NHMRC website for specific documentation for Priority Round 4 when it becomes available. NHMRC funding is subject to governmental approval processes.
